Fire Weather Summary

The 1994 fire season was the most demanding on record. Major fire activity involving all of the western Geographic Areas occurred from the end of May through September. Demand for resources of all types often exceeded the supply. While the West was burning furiously, the East experienced temperatures within normal ranges and higher than average precipitation.

West

Fire season in the West was long and arduous, involving every geographic region in the United States. The following factors were responsible for the severity of the Western fire season:

1. A stronger than normal upper low over the Hudson Bay, and a stronger than average high pressure ridge along the West Coast caused the winter of 1993/1994 to be mild and very dry. Western snowpack levels on April 1, 1994 were only 50 to 80 percent of normal levels.

2. Spring, like winter, was drier and warmer than normal. A warm spring and meager snowpack resulted in an unusually fast snowmelt.

3. The summer months were hotter and drier than average, as a strong high pressure ridge settled over the west. The Great Basin, and much of the southern and central Rockies had one of the hottest summers of this century. Many records were set: Boise had 44 consecutive days with temperatures of 90 degrees Fahrenheight or higher; Denver had 55 days of temperatures above 90°F; and Salt Lake City had 21 days of temperatures at or above 100°F. This was the driest summer in the Pacific Northwest since 1949, and the driest summer of this century in the Great Basin and upper Colorado Basin.

4. The dry and warm period from winter thru summer produced very low fuel moisture across the West. Hundreds of wildfires were ignited by lightning during June and July in the Southwest and Rocky Mountain Areas. The monsoon season moisture brought relief to the Southwest in mid-July, but contributed to weather systems producing dry lightning and more wildfires in northern California, the Pacific Northwest, and the northern Rockies in late July and August.

By late September and early October, the upper air patterns reversed with a low pressure trough developing in the East. Cool and wet weather in October brought an end to the Western fire season.

Fire Activity Summary

The 1994 fire season was one of the longest and most severe in recent history. The season continued long after the average season-ending rain or snow event resulting in record-breaking costs of nearly one billion dollars. Fire activity in the West soared while resources battled the most intense fire season since the Yellowstone fires of 1988. Fire activity in the East was moderated by temperatures within normal ranges, and precipitation generally higher than average. Many of the lightning-caused fires occurred within a 2- to 3-day period. A large number of fires were burning at the same time, and scarce firefighting resources were stretched thin. Lack of firefighting personnel and equipment at critical times cause fires to escape that could have been suppressed if adequate resources had been available.

The fires of the 1994 season claimed the lives of 34 firefighting personnel, 14 of those lives were taken on the South Canyon Fire in Colorado.

Fire Activity Summary

January -April

The winter of 1993-1994 was mild, with below normal precipitation and snowpack over much of the western United States. Areas of severe and extreme drought, as measured by the Palmer Drought Index (PDI), increased significantly in the Northern Rockies, Great Basin, California and the Northwest Geographic Areas.

During the first quarter of 1994, the southern Area experienced a below average spring fire season. There was minor initial attack activity and some large fires; but most fires were contained within the second day. A Type I Incident Management Team was mobilized on January 18 to manage a receiving and distribution center for the Northridge Earthquake.

The northern Rockies and the southwest Areas experienced very active fire conditions for March and early April. By the end of April, the Southern Area's fire season was winding down, with the exception of some significant activity in Texas and southern Florida.

May

By May 1, snowpack levels across the West were well below average. The worst conditions existed in California, Nevada, and Oregon, where snowpack levels were less than half of normal. Fire activity in the Southwest was well below normal for May. The remainder of the West experienced cool, moist conditions for much of the month with no significant fire activity reported. Areas of extreme and severe drought, as measured by the PDI, continued to expand in the West.

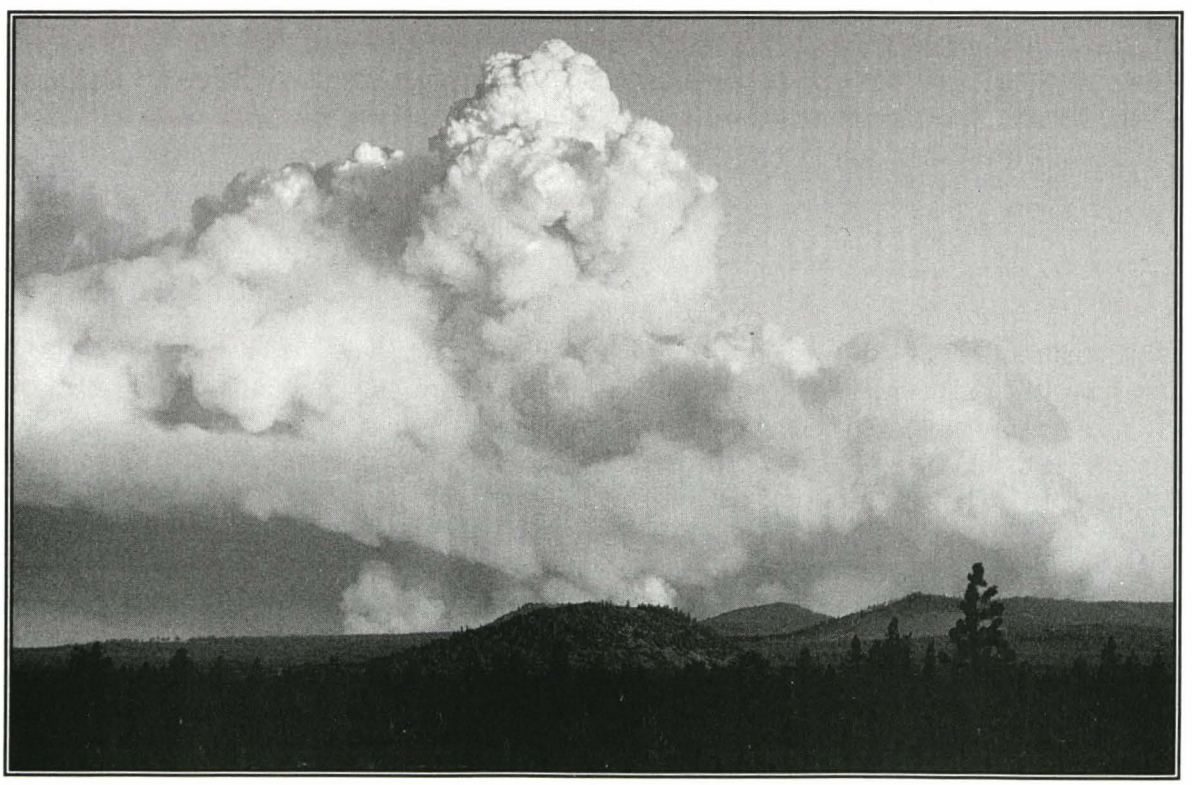

Photo: USDA Forest Service

Fire Activity Summary

June

Major fire activity occurred in many areas of the West during June. The Southwest experienced a very active month. Large fires occurred on a daily basis. The Rocky Mountain, Great Basin and Southern Areas also had significant activity. By mid-month, fire danger had also increased in Alaska. With widespread fire activity in the Southwest, California, and Rocky Mountain Areas, the National Interagency Coordination Center (NICC) raised the National Fire Preparedness Level to III on June 27.

Photo: USDA Forest Service

July

The fire situation in the Southwest and the Rocky Mountain Areas reached a critical level by July 1. Dry lightning storms ignited several hundred fires. Record breaking temperatures and strong winds caused many fires to spread rapidly. On July 17, the monsoon season began in the Southwest bringing a series of dry lightning storms to the north beginning on July 21, and continuing until September 11. Fire conditions moderated in the Southwest and Rocky Mountain Areas. The Northwest, North Zone, northern Rockies, and Great Basin Geographic Areas were heavily impacted by dry lighting causing 102 major fires. Within each Geographic Area, these fires were widespread, complicating the logistical support and suppression efforts. On July 28, the NICC raised the National Fire Preparedness Level to IV, and on July 29 to Level V. Military assistance was requested on July 28 for a battalion of firefighters (approximately 600 people). A total of seven military battalions were mobilized during July and August for fires in the Northwest, Northern Rockies, and Great Basin Areas.

Fire Activity Summary

August

By August 1, virtually all available agency and private sector resources were committed on fire incidents. There were unprecedented demands on the logistical support system as fire activity remained at record levels for this period. Multi-Agency Coordinating Groups (MAC) at both the Geographic Area and National levels were prioritizing incidents and allocating and re-allocating scarce resources. At the peak of activity in August, more than 25,000 fire fighters, 900 engines, 155 helicopters, 4 airtankers, 31 mobile kitchens, and 42 shower units were assigned to fires.

September

Between September 10 and 13 light rain showers occurred over much of the Northwest, the Northern Rockies, North Zone, and the central mountains of Idaho, providing relief from the long, hot summer. On September 13, the National Fire Preparedness Level was lowered to IV, and to III on September 16.

At the end of September, significant initial attack activity continued in the Western Great Basin and North Zone. Large fires in the Northern Rockies, Northwest, and eastern Great Basin continued to burn actively under warm, dry, and windy weather conditions. A Type I Incident Management Team was mobilized to manage recovery efforts for several flood damaged villages in Alaska.

Photo: USDA Forest Service

October & November

The situation began to moderate in October. Fall weather and shorter days diminished fire activity. Demand for resources slackened, resulting in surpluses for the first time in months. On October 5, the National Preparedness Level was lowered to II, and to I on October 19.

In the third week of November, fire activity occurred in Kentucky, Tennessee, and Georgia. This activity resulted in the mobilization of resources from all over the country. By Thanksgiving, more seasonal weather conditions returned, and fire activity diminished.

Large Wildfire Occurence Report

In 1994 there were 161 Class F and G Wildfires (over 1,000 acres) which burned land totalling 1,558,169 acres. Acreages listed represent the total acres burned on each fire, and include acreages for all land ownerships under Forest Service protection.

1. There were no fires reported on National Forest lands in the States of Maine and New York.
2. National Forest acreage in the States of Connecticut and Hawaii is research and/or experimental land only.
3. There are no National Forest lands in the following States: Delaware, Iowa, Maryland, Massachussets, New Jersey, and Rhode Island.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (braille, large print, audiotape, etc.) should contact the USDA Office of Communications at 202-720-2791.

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, DC 20250 or call 1-800-245-6340 (voice) or 202-720-1127 (TDD). USDA is an equal employment opportunity employer.
